

Dear Sirs,

Organized by the **ISTMA Europe** federation, in close cooperation with the European Platform **ManuFuture**, the German city of **Wiesbaden** will host the third edition of **European Tooling Forum** on the **28<sup>th</sup> November 2011**.

Over the last years, **ISTMA Europe** has directed its activity towards drawing attention, increasing visibility and importance of the sector among public opinion, in particular of official bodies at national and international level, with special focus on the development of contacts with the European Commission.

Targeting the maintenance of the sector's competitiveness and sustainable development vis-à-vis the challenges of an ever increasingly global and aggressive market, **ISTMA** has been a pivot in the organization of key initiatives gathering the Industry's stakeholders, assuming simultaneously a key role in the facilitation the sector's access to community initiatives and programs, by promoting strategic projects and research, development and demonstration activities.

Following the success of the first edition held in Lisbon in 2007 and the second one in Milan back in 2009, the Wiesbaden **European Tooling Forum** will embody, integrate and leverage the Industry's priorities, consistently fostered in **ISTMA Europe's** multiple activities over the last years.

Congregating the Industry, decision-makers and responsible for national and European public policies, representatives from associations, research centers and universities, clients, entrepreneurs and renowned experts, the **European Tooling Forum** will gather the Industry's stakeholders in order to discuss and highlight the Mouldmaking and Special Tooling Industry' importance and strategic positioning for the sustainable development of European Industry and Employment.

Notably, the **Forum** intends to alert, debate and motivate all the stakeholders to:

- The strategic importance of the Moulding and Tooling sector in **innovation** and in the development of new products, technologies, know-how and skills in the European Economy;
- The sector's impact in the European Union's industrial infrastructure;
- The importance of European strategic cooperation networks along the European value chain versus the positioning of a sector like the Mould and Tooling, dominated by SME's and, consequently, receiving reduced media coverage;
- To foster and promote the sector's strategic importance in the development and sustainability of the European economy among political decision centers, at the level of National Governments, as well as European Commission representatives in Brussels and in Strasbourg;

Ultimately, innovation, European employment and the sustainability of industrial development remain as paramount topics of the **European Tooling Forum's** motto, in the 2011 edition.

**We are counting on your presence during this important event for the development and recognition of our Sector and our Industry. Don't just think about perspective – talk about it! The more you can share, the more others can become invested in helping to achieve them.**

Janez Poje  
President of ISTMA-Europe
